Image Denoising and Deblurring

Mathematical Formulation

True image   Observed image

$$Ax + w = b$$

Blur operator   Noise

- Blur: Ax is a discrete convolution of the true image with a Gaussian kernel (reflexive boundary conditions).
- Noise: w is noise drawn from a Gaussian or Student's t distribution.

Naive Solution: $x = A^{-1}b$

True image   Blurred image   Recovered image
Naive Solution: $x = A^{-1}(b - w)$

True image   Blurred and noisy image   Recovered image

Since the blur operator is ill-conditioned, a better approach is to minimize a regularized loss function.

General Loss Function

$$L_b(x) \;=\; \underbrace{f(Ax - b)}_{\text{Fidelity term}} \;+\; \underbrace{\lambda R(x)}_{\text{Regularization}}$$
Fidelity Terms

$$f = \begin{cases} \|\cdot\|_F^2 \\ h_\gamma(\cdot) \\ \gamma^{-1}\log(\cosh(\gamma\cdot)) \end{cases}$$

Regularization Terms

$$R = \begin{cases} \|Wx\|_1 \\ TV(x) \end{cases}$$

Fidelity Term Penalty Functions

THIS SLIDE NEEDS HELP!
What is Ax - b Why use different functions than frobenius norm? Use pictures as motivation. Show quadratic and huber penalty functions, show different distributions?

Image Assumptions and Regularizers

2-Level Haar Transform

$|x_{ij} - x_{i+1,j}| + |x_{ij} - x_{i,j+1}|$
Our choices of regularizers assume that images are sparse in wavelet domains and that they are relatively smooth (low total variation). SPLIT THIS INTO 2 SLIDES

L1 Wavelet Regularization

Loss Function

$$L_b(x) = f(Ax - b) + \lambda \|Wx\|_1$$

Proximal Gradient Step

$$x^{k+1} = \mathsf{prox}_{\alpha^{-1}\lambda\|W\cdot\|_1}\left(x^k - \alpha^{-1}A^T\nabla f(Ax^k - b)\right)$$

Results: Gaussian Noise

Blurred and Noisy

Frobenius Loss

Huber Loss

Choosing λ

$\lambda = 10^{-4}$ $\lambda = 10^{-3}$ $\lambda = 10^{-2}$
Total Variation Regularization

Loss Function

$$L_b(x) = f(Ax - b) + \lambda \mathrm{TV}(x) + \delta(x|[0,1])$$

Proximal Gradient Step

$$x^{k+1} = \mathrm{prox}_{\alpha^{-1}(\lambda\|\cdot\|_{TV} + \delta_{[0,1]})}(\underbrace{x^k - \alpha^{-1}A^T\nabla f(Ax^k - b)}_{u^k})$$

$$= \underset{z}{arg\ min} \left(\|u^k - z\|_F^2 + \alpha^{-1}\lambda\|z\|_{TV} + \delta(z|[0,1]) \right)$$

$$= P_{[0,1]} \left(\underset{z}{arg\ min} \left(\|u^k - z\|_F^2 + \alpha^{-1}\lambda\|z\|_{TV} \right) \right)$$

Dual Form of Total Variation

A Few Definitions

- $\mathcal{P} = \{(p, q) \in \mathbb{R}^{(m-1)\times n} \times \mathbb{R}^{m\times(n-1)} : |p_{i,j}| \leq 1, |p_{i,j}| \leq 1\}$,
- $\mathcal{L} : \mathbb{R}^{(m-1)\times n} \times \mathbb{R}^{m\times(n-1)} \to \mathbb{R}^{m\times n}$ such that

$$\mathcal{L}(p, q)_{i,j} = p_{i,j} + q_{i,j} - p_{i-1,j} - q_{i,j-1}$$

  for $i = 1, \ldots, m$, $j = 1, \ldots, n$, and
  $p_{0,j} = p_{m,j} = q_{i,0} = q_{i,n} = 0$.
- P_C is the usual projection operator onto the set C

Total Variation

$\mathrm{TV}(x) = max_{p,q\in\mathcal{P}} T(x, p, q) \implies T(x, p, q) = \mathrm{Tr}(\mathcal{L}(p, q)^T x)$.

Dual Form of TV Denoising with $\|\cdot\|_F^2$

The problem:

$$\min_{x \in C} \|x - b\|_F^2 + 2\lambda \mathrm{TV}(x), \ C = [0, 1]$$

Dual problem:

$$\min_{(p,q) \in \mathcal{P}} \underbrace{-\|H_C(b - \lambda \mathcal{L}(p, q))\|_F^2 + \|b - \lambda \mathcal{L}(p, q)\|_F^2}_{h(p,q)}$$

$$H_C(x) = \underbrace{x - P_C(x)}_{\text{prox}}$$

Optimality conditions:

$$x = P_C(b - \lambda \mathcal{L}(p, q)).$$

Optimization of Dual Form

Problem Statement

$$\min_{(p,q)\in\mathcal{P}}\left\{\|b-\lambda\mathcal{L}(p,q)\|_F^2 - \|(I-P_{[0,1]})(b-\lambda\mathcal{L}(p,q))\|_F^2\right\}$$

$$\min_{(p,q)}\left\{\underbrace{\|b-\lambda\mathcal{L}(p,q)\|_F^2 - \|(I-P_{[0,1]})(b-\lambda\mathcal{L}(p,q))\|_F^2}_{=h(p,q)} + \delta((p,q)|\mathcal{P})\right\}$$

$$\nabla h(p,q) = -2\lambda\mathcal{L}^T P_{[0,1]}(b-\lambda\mathcal{L}(p,q))$$

Lipschitz with constant $\leq 16\lambda^2$

$\Rightarrow$ Use projected gradient

Optimization in Dual Form

Projection onto $\mathcal{P}$

Recal $\mathcal{P} = (p, q) \in [-1, 1]^{m-1 \times n} \times [-1, 1]^{m \times n-1}$

$$P_{\mathcal{P}}(p, q) = (r, s) \text{ with } \begin{cases} r_{ij} = sgn(p_{ij}) \min\{1, |p_{ij}|\} \\ s_{ij} = sgn(q_{ij}) \min\{1, |q_{ij}|\} \end{cases}$$

Projected Gradient Step

$$(p^{k+1}, q^{k+1}) = P_{\mathcal{P}} \left((p^k, q^k) + \frac{1}{8\lambda} \mathcal{L}^T P_{[0,1]}(b - \lambda \mathcal{L}(p, q)) \right)$$

Summary of Fast TV Regularization

MFISTA(b, f, λ)

$y^1 = x^0 = b; \ t^1 = 1$

$\alpha \geq Lip(\nabla f)$

for $k = 1 : N$ **do**

$\quad u^k = y^k - \frac{A^T \nabla f(Ay^k - b)}{\alpha}$

$\quad z^k = FGP(u^k, \frac{\lambda}{2\alpha})$

$\quad x^k = \underset{x \in \{x^{k-1}, z^k\}}{\text{argmin}} \ L_b(x)$

$\quad t^{k+1} = \frac{1 + \sqrt{1 + 4t^{k2}}}{2}$

$\quad y^{k+1} = x^k + \frac{t^k}{t^{k+1}}(z^k - x^k)$

$\qquad\qquad + \frac{t^k - 1}{t^{k+1}}(z^k - x^k)$

end for

return x^N

FGP(b, λ)

$(r_{ij}^1, s_{ij}^1) = (p_{ij}^0, q_{ij}^0) = 0; \ t^1 = 1$

for $k = 1 : N$ **do**

$\quad (p^k, q^k) = P_{\mathcal{P}}\left((r^k, s^k) - \frac{\mathcal{L}^T P_{[0,1]}(b - \lambda \mathcal{L}(r^k, s^k))}{8\lambda} \right)$

$\quad t^{k+1} = \frac{1 + \sqrt{1 + 4t^{k2}}}{2}$

$\quad (r^k, s^k) = (p^k, q^k) + \frac{t^k - 1}{t^{k+1}}(p^k - p^{k-1}, q^k - q^{k-1})$

end for

return $P_{[0,1]}(b - \lambda \mathcal{L}(p^N, q^N))$
